March 1, 2006

Dear Tres,

I wanted to drop you a line to thank you for the great and very informative Performance Boating class. I have been boating on inland lakes and Florida waters for most of thirty years. I hoped I knew most of what I needed to be a safe boater, until I took your course. Our 16 year old son, Robert, has been boating all his life and is very much at home on the water. He and I have taken several safe boating courses including the Power Squadron and both the Ohio and Kentucky mandatory licensing courses for young boaters.

Last year we stepped up from the relaxed world of runabout boating and purchased a performance power boat. Since this is a totally different type of boating we decided to see if there was additional information we needed to learn. We are glad we did.

Learning how to safely handle a boat at high speeds is much different than normal boating. Learning how a stepped vee hull works and reacts in both smooth and rough water will make a difference in the way I function as the operator of a high performance boat. Learning how the trim tabs and the drive positions alter the altitude and handling of the boat in different conditions really makes the boat comfortable for the passengers as well as my not so young body.

Tres, your class had it all: individual attention; hands on experience; and a focus on safety. Your class gets an A+ from Robert and I. I will recommend it to any boater wishing to be safe on the water ways while getting the most from their performance boat.

Thanks again,

  
Rob Crapsey
