

I have been a powerboater for 17 years, of which the last 3 were in high performance catamarans. With this much boating experience I was fairly confident I was solid captain of my new 36' Eliminator Daytona Coupe. I can honestly say that in the one and half day class,

I learned more valuable skills around performance boat handling than I have the entire 3 years I've been driving my Cat. The way Tres takes us through the science of hulls and how trim, tab, steering all affect the stability and safety of our performance boat handling was brilliant. Not only did we learn the valuable skill but we understood a context that would take dozens of years to learn on your own.

This enabled graduates of his course to understand how your boat communicates with you so you can optimize the ride for you and your crew as well as optimize the vessels safety.

This was one of the most valuable 1 1/2 days I've spent.

I strongly encourage anyone who is driving a performance boat over 70 mph to take this course. They won't regret it.
